

GPC  SERIES

ORDER PICKING SIMPLIFIED

Seconds count in order picking applications. That's why Crown designed the GPC 3000 Series to maximize efficiency, comfort and productivity throughout the entire picking cycle.

Find out how the GPC 3000 can help optimize your picking process and boost productivity.

Ergonomics for Entry/Exit

A wide platform and low entry step provide optimal ergonomics for frequent entry and exit while picking. The fully suspended floorboard and anti-fatigue floor mat enhance operator comfort.

Pick Position Control

The optional Pick Position Control feature allows operators to "advance" the truck to the next pick location without entering the operator platform, saving time and reducing operator fatigue.

Second Level Picking

The optional Platform Lift raises operator height to 37.4 inches from the floor for second-level picking. Alternatively, a fold down step option is available (not in combination with Platform Lift).

Operator Comfort

A cushioned and contoured back rest, optional fold-down lean seat and cushioned knee pad provide comfort for operators.

Performance

Standard e-GEN braking from the powerful AC traction motor, along with electronic power steering, assure precise control, durability and low maintenance that you demand.

Maximize your order picking productivity and efficiency with the GPC 3000.
