

C-D SERIES

DELIVERING STRENGTH AND RELIABILITY

Providing strong performance is a key part of bringing confidence to your operators every day as they use a lift truck. Crown's C-D Series 8,000 to 12,000 pound diesel pneumatic forklifts use a 3.4 L diesel engine to deliver strength along with the reliability and support you expect from Crown.

Discover the strength and reliability you can expect from CD35-55 models:

Industrial Diesel Engine

A turbocharged, intercooled 3.4 L Doosan diesel engine with gear-driven valve train produces 74 HP providing high torque at low rpm, lower fuel consumption and increased reliability. Compliant with Tier 4 Final exhaust emissions without the use of a Diesel Particulate Filter. No Diesel Exhaust Fluid (DEF) required. Two performance modes.

Powershift Transmission

A 2-speed transmission with a standard Auto-shift feature helps extend transmission and tire life by softening on-the-go direction changes and prevents accelerating from a standing start in high gear, further increasing fuel economy.

Oil-Cooled Disc Brakes

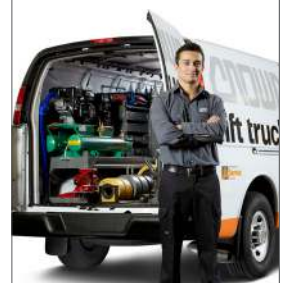

Dual braking assemblies are fully enclosed to prevent outside contamination and include a 5-year, 10,000-hour warranty, providing exceptional stopping power and long life.

Operator Environment

A suspension seat, tilt steering and thoughtful control placement reduce fatigue. Choose from two overhead guard heights, roof covers and full cabins with optional A/C and heat. Optional suspension seats with heat and seat belt interlock are also available. Rear view camera and weight scales enhance the user experience.

Crown Service and Support

The C-D Series is a robust forklift backed by Crown's nationwide service and support network, including quality parts and the assured performance of the Crown Integrity Service System®.

Crown CD35-55 Diesel Pneumatic Forklifts,
Strength and Reliability that Exceeds Expectations.
