

ES SERIES

PRECISION AND STRENGTH IN SMALL PLACES.

The fork-over design of the Crown ES 4000 stacker makes it the ideal solution for handling tubs, wire baskets, skids and open-bottom pallets. Because the outriggers are positioned underneath the forks, fork-over stackers improve space utilization when compared to straddle stackers.

The Crown ES 4000 Series is built to perform in the toughest environments. Smooth, responsive controls and superior all-around visibility significantly improves throughput and promotes safe operation when maneuvering in tight areas.

Discover why the ES 4000 Series is the most durable and productive truck in its class:

Robust and Reliable

A Crown-built AC traction motor and cast iron gear box ensure power and strength. The e-GEN[®] braking system virtually eliminates brake maintenance.

Visibility Advantage

A contoured power unit, high-visibility mast design and center-mounted handle boost operator confidence and efficiency when working in confined areas.

Handle with Ease

Crown's innovative X10[®] handle simplifies operation and reduces fatigue. The brake override feature optimizes control when maneuvering in tight areas.

Performance and Control

Crown's exclusive Access 1 2 3[®] technology optimizes control and performance. The Access 1 2 3 display facilitates advanced diagnostics and programming.

Work Assist

Carefully integrated Work Assist[®] accessories improve operator performance and satisfy specific application needs.

Choose Crown's ES 4000 Series for **maximum productivity** and **long-lasting value.**
